AIRPHX: Complete Indoor Disinfection

The recent turn of events has forever changed the face of fitness. Wiping down equipment and periodic cleaning of your gym is no longer deemed sufficient or acceptable. Fitness facilities must make sustained efforts to disinfect their gyms in order to provide members and staff with a safe workout environment. And it is no longer enough to just emphasize surface disinfection. Disinfection of the air in a facility is equally if not more important. The solution is AIRPHX®.

Now More Than Ever

With many gyms seeing reduced numbers of members returning to their prior workout habits, AIRPHX customers have seen great success in restoring members' confidence in returning to the gym. With AIRPHX's self-contained, wall-mounted unit installed in your facility, you will provide members with an important visual reminder that you have installed state-of-the-art disinfection technology to provide them with the ultimate safe workout experience. And by prominently displaying the AIRPHX Complete Indoor Disinfection seal, members can quickly scan the QR code and learn more about AIRPHX's state-of-the-art disinfection system.

AIRPHX: Proven Disinfection

Every fitness facility has been bombarded by companies claiming their technology is the solution to bring members

back to the gym. Electrostatic sprayers, UV devices, bi-polar ionizers, photocatalytic oxidation systems -- you've no doubt heard all the pitches. But ask these companies one extremely important question:

Does the system effectively disinfect both the air and surfaces continuously in large occupied spaces?

If you are told by any particular salesperson that it does, **ask for the proof.** We are not talking about lab results; killing bacteria and viruses in a small controlled lab setting is not the same as killing them in a large occupied space like your fitness facility. AIRPHX Sports has posted numerous test results conducted by an independent lab showing pathogen reductions at fitness facilities across the country. **These test results on average show greater than 90% reductions in the air and greater than 95% on surfaces. We challenge any competing technology to be able to come close in a large fitness facility.**

Workout Anytime – Sylacauga, AL

Over 1,000 Units Sold and Growing

More and more, clubs across the country are recognizing the need for a disinfection system like AIRPHX. With over 1,000 installations and growing daily, AIRPHX is the industry leader in complete indoor disinfection for fitness facilities. But it did not take recent events for some AIRPHX customers to adopt AIRPHX technology. Workout Anytime began installing AIRPHX

several years ago in all of its new locations. Co-founder and CEO, Steve Strickland, notes that “AIRPHX has been the ideal solution for providing our members and staff with the safest and healthiest workout experience possible. By continuously disinfecting both the air and surfaces, members truly notice the difference and have been confident that we are using best practices to protect them.” Now a brand standard for every new Workout Anytime location, including 20 more opening this year, Strickland further observes “I can’t imagine our clubs without AIRPHX. We even installed one at our corporate headquarters!”

Don’t You Belong On This List?

AIRPHX is changing the industry!

One large unit will treat 175,000-250,000 cubic feet, achieving hospital grade levels of disinfection. And when the oxidizing air circulates thru HVAC systems, AIRPHX produces benefits throughout an entire fitness facility!

AIRPHX is the quick, easy, and affordable solution to the incessant odors and bacterial and viral incursion that are the bane of athletic spaces. Bacteria, MRSA, C.diff, mold, Staph,

athlete’s foot fungus, coronavirus and norovirus virtually eliminated through the continuous use of AIRPHX technology. AIRPHX eliminates odors, bacteria, viruses and other harmful organisms throughout a facility — in the AIR and on SURFACES including: equipment, turf, rubber, foam, and tile.

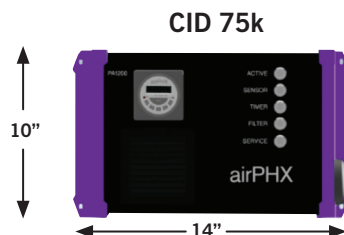

PA2400

Specifications

- 19.0” height
- 16.0” length
- 9.5” depth
- 40 lb weight
- 175,000-250,000 cubic ft

AIRPHX Introduces the New CID 75k

Whether you are a small fitness facility or a Big Box location, AIRPHX can recommend the right unit for you. The new CID 75k can treat spaces with up to 75,000 cubic feet of air and is perfect for smaller facilities and studios.

CID 75k

Specifications

- 10” height
- 14” length
- 4.5” depth
- 8 lb weight
- 50,000-75,000 cubic ft

Sleeker, smaller, lighter and less expensive, the CID 75k is the perfect solution for locations that did not need the larger capacity of the PA2400. With deliveries beginning this month, customers have already ordered over 500 units. Let us know if we can reserve one for your facility.

Put the health of your members first!

PROTECT – DON’T INFECT
